

Try a set of winter tyres!!! You can't go wrong...

'Winter tyres' are specially designed to deal with colder, wet, icy and snowy conditions. They are not specific to snow and ice – so if you think you don't need them in the UK, think again! They greatly improve braking distances on wet or icy roads as soon as the temperature drops under 7 degrees C – i.e. between October and March each year.

Here at Colemans we have a huge range of winter tyres in all patterns and sizes to fit any vehicle...

Our tyres range from budget to mid-range and we even stock premium tyres in winter patterns!!!

205/55R16 NEXEN EUROWIN 91H
